

A-share lithium battery rare earth permanent magnet energy storage

Overview

Because motors built with rare earth permanent magnets deliver: A PMSM is 30–40% more efficient than a motor that does not use rare earth permanent magnets. This improves the battery's job — allowing the same battery to travel more kilometers on the same charge. Tesla's Model 3 (rear motor) and. The Global Critical Minerals Outlook 2025 showed that, for a remarkable 19 out of 20 important strategic minerals, China is the leading refiner, with an average market share of 70%. The unique properties of REEs make them indispensable in the development of high-performance batteries. For instance, neodymium is used in the production of powerful.
