

Analysis of rural microgrid issues

Overview

This paper analyses a hybrid microgrid case study in a rural area integrating PV-biomass-BESS using mathematical models and simulations in MATLAB/Simulink Version 2025a, characterizing local resources (climate and biomass), and evaluating irradiance, temperature, and demand. On typical. ant issue in the power market. A complete study on the rural microgrid system for optimum cost and optimum si velopment is costly or impossible. Keywords Energy resource planning ·Linear programming ·Sensitivity an cro-grid. Microgrids (MGs) have the potential to be self-sufficient, deregulated, and ecologically sustainable with the right management. Additionally, they reduce the load on the utility grid. These communities are more likely to be underserved when it comes to electrical power needs, and they face a more challenging task recovering from natural di nerators as a primary source of power.
