

# Bess system for solar factory in Germany

## Overview

---

BMW Leipzig cracked the code in 2025. By integrating massive rooftop solar with rugged 8MWh Industrial BESS Container Solutions, their assembly lines now run 24/7 completely independent of the night grid – a move validated by Fraunhofer ISE to slash €480,000 off their annual energy. BMW Leipzig cracked the code in 2025. They operate by charging during periods of surplus electricity generation and discharging during periods of high demand or low generation. The German legal framework for BESS projects is currently also in a process of changes: The German parliament adopted a comprehensive energy reform package on 31 January 2025, which includes relevant changes for BESS projects with the aim to further support the growth of storage capacities in. Battery Energy Storage Systems (BESS) are advanced technologies designed to store energy generated from various sources, such as solar and wind, for later use. Analysis by pv magazine shows almost 2.1 million battery storage systems (BESS) are now in operation in Germany. They offer one of the key need that an energy system increasingly characterised by renewable energies needs: short term Flexibility.
