

# Building solar panel power generation principle

## Overview

---

When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel. This energy creates electrical charges that move in response to an internal electrical field in the cell, causing electricity to flow. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Whether you're exploring solar for daily home energy, emergency backup, or long-term resilience, this guide will help you understand not just that. Solar power works by converting energy from the sun into power.
