## Overview

---

Silicon Carbide (SiC) technology has transformed the power industry in many applications, including energy harvesting (solar, wind, water) and in turn, Energy Storage Systems (ESSs). These trailer-size units store generated electrical energy from conventional and intermittent renewable sources during surplus generation periods, then give it back to the grid as needed, functioning as a peak-demand power reservoir. As this technology continues to make its impact on smart grid. Wolfspeed Silicon Carbide is capable of incredible reliability and efficiency within battery-based energy storage systems, meaning power is always available even when the sun sets. Recently, Infineon Technologies AG announced.
