

# Can we add a few more photovoltaic panels

**PV / DG  
Application**

**APP Intelligent  
Control**

**Multi-Unit Parallel  
Expansion**

**98.8% Max.  
Efficiency**

## Overview

---

So it makes sense to ask: Can I add more solar panels to my system?

In most cases, yes. It's a smart way to boost your system's output and cut those. If you add solar panels to an existing system, you can increase your solar electricity generation, extend the life of your installation, and create further savings on utility energy costs. If there's enough available installation space, the cost of adding extra panels may be beneficial to maximize. Sometimes, you'll outgrow the original solar system installed on your roof, and you might need to add some more panels to meet your additional electricity needs. The economics will probably look a lot different then the first time you went solar.
