

Can wind power surpass generators

LiFePO₄

Wide temp: -20°C to 55°C

Easy to expand

Floor mount&wall mount

Intelligent BMS

Cycle Life:≥6000

Warranty :10 years

Overview

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. In March and April, a sign that the setbacks offshore wind faced last year have not halted the industry's broader momentum. This wasn't just a symbolic moment. It signaled a deep structural change in how the world's largest economy produces its energy. Electricity generation from wind power is on course to surpass coal-fired electricity generation, potentially by 2026, as wind supply growth expands at a record pace just as coal-fired generation is cut across the country. Wind turbines generated more electricity than coal-burning power plants across the United States in March and April, outstripping the dirtiest fuel for two consecutive months for the first time, according to the Energy Information Administration.
