

Cuprous Oxide Solar Power Generation

Overview

Several primary characteristics of Cu_2O make it potential material for use in thin film solar cells: its non-toxic nature, a theoretical solar efficiency of about 9-11%, an abundance of copper and the simple and inexpensive process for semiconductor layer formation. As a solar cell material, cuprous oxide - Cu_2O , has the advantages of low cost and great availability. When copper metal is oxidized it can take several oxidation states. In our. TOKYO—Researchers at Japan's Toshiba Corporation (TOKYO: 6502) have announced a significant advance in their work to develop an efficient, low cost and highly reliable tandem solar cell that raises the output of solar panels by layering a transparent solar cell over a standard silicon cell.
