

Differences between perovskite battery and photovoltaic panels

Overview

Perovskite is much better at absorbing light than crystalline silicon and can even be 'tuned' to use regions of the solar spectrum largely inaccessible to silicon photovoltaics. They have the advantage of being inexpensive and flexible. Perovskite solar cells provide a middle ground. They've reached higher efficiency levels than other types, can be made in thin-film form for maximum. Perovskite solar cells are a high-efficiency, low-cost alternative to traditional silicon-based solar panels.
