

Does the energy storage battery need an inverter

Overview

To have backup power during outages or extreme weather events, you need to store energy locally—in batteries. However, batteries can only store DC power. It converts direct current (DC) from a solar system into alternating current (AC). The energy can either be used right away, stored in a battery, sent to the grid, or safely dissipated. While batteries improve energy storage, they are not essential for. Most standard inverters shut down during an outage to prevent unsafe backfeed into utility lines (anti-islanding).
