

# Does the power base station have solar power generation function

## Overview

---

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage. EverExceed's Telecom Base Station Stacked Solar Power System provides an innovative solution by integrating solar generation with traditional grid power—helping operators achieve stable, efficient, and sustainable energy supply. Solar panels convert sunlight into electricity, 2. Signals are transmitted using radio waves, 4. In this sense, the solar power generation system plays a key role in powering the base station.
