Overview

This work includes technoeconomic analysis of photovoltaic (PV) and concentrating solar-thermal power (CSP) technologies; analysis of electricity markets, solar access, and environmental impact; and analysis of PV integration into the grid to minimize cost while improving resiliency. Solar energy cost analysis examines hardware and non-hardware (soft) manufacturing and installation costs, including the effect of policy and market impacts. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov. It highlights the growing concerns over CO₂ emissions and energy demand, underscoring the importance of renewable energy sources, particularly.
