

Egypt solar cell panels

Overview

Egypt is positioning itself as a major player in the global solar panel manufacturing industry, with ambitious plans to produce 20 GW of solar panels annually. In 2012, the U.S. Department of Commerce first placed antidumping tariffs on Chinese solar panels, after which manufacturers shifted production to Taiwan and then Southeast Asia. Regardless of China's involvement, Southeast Asia became the core solar panel manufacturing spot until the United States put more. E LITE Solar has officially commissioned a large-scale solar manufacturing complex in Egypt, positioning the country as a new supply hub for the United States amid tightening global trade restrictions on solar equipment.
