

# Electricity distribution senegal

## Overview

---

Energy is produced by private operators and sold to the Senelec energy corporation. According to a 2020 report by the International Energy Agency, Senegal had nearly 70% of the country connected to the national grid. [2] . With a national electricity access rate of 84%, Senegal is making progress towards universal energy access, yet more than 30 % of rural communities remain disconnected from the grid. As part of the Just Energy Transition Partnership, Senegal has committed to bold reforms to increase renewable. As of April 2020, the energy sector in Senegal has an installed capacity of 1431 megawatts (MW). Priorities include reduction of energy costs through diversified energy sources, addition of generation capacities. Map projecting lowest cost orientation of electric lines given the cost of fuel and solar over the next few years This page contains general information about electricity access in Senegal, some statements on what electricity might be able to teach us about inequality in Senegal and information. The Senegalese national electricity supplier has awarded VINCI Energies a huge network and infrastructure rollout project. Its objective: electricity for all by 2026.

## Energy in Senegal

Overview Electricity production Electricity sector Electricity demand and supply gaps

Senegal's major source of electricity is diesel. The rest is mostly coal and hydroelectricity. Renewables should make up 30% of the country's energy mix and the wind farm in Taïba Ndiaye will supply half. The planned energy mix aims to help Senegal move away from oil dependence, although newly discovered gas reserves offshore are expected to be used domestically to replace diesel and coal.
