## Overview

---

Battery energy storage costs have reached a historic turning point, with new research from clean energy think tank Ember revealing that storing electricity now costs just \$65 per megawatt-hour (MWh) in global markets outside China and the United States. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up. Each year, the U. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U. These benchmarks help measure progress toward goals for reducing solar electricity costs. But the real test for solar power will be how soon it can become constant with the addition of energy storage and be cost-competitive with fossil fuels used to power electricity generation. A thorough analysis of historical data, combined with current market. Average price of solar modules, expressed in US dollars per watt, adjusted for inflation.
