

Energy storage lithium battery disassembly

Overview

In this research, a systematic review was conducted on the publications from major databases, such as Scopus, SpringerLink, and others, to explore the current state of disassembly processes in LIBs' recycling. At its core, battery disassembly is the process of taking apart a battery or battery pack to access its internal components. Think of it like carefully peeling back the layers of something complex to understand what makes it tick. This action is far more than just a simple dismantling; it's a. Recycling plays a crucial role in achieving a sustainable production chain for lithium-ion batteries (LIBs), as it reduces the demand for primary mineral resources and mitigates environmental pollution caused by improper disposal.
