## Germany renewable energy growth

---

### Renewable energies in figures

Up-to-date and quality controlled data on the development of renewable energies in Germany are an important basis for the evaluation of Germany's energy transition.

### Renewable Energy in Germany: 59% of Electricity in 2024

In 2024, renewable energy sources accounted for 59% of Germany's total electricity production, up from 56% in 2023. Out of 431.7 TWh of electricity generated, an impressive 254.9 ...

### Renewable energies in figures

Introduction  
Share of Renewables in Gross Final Energy  
Consumption  
Electricity Generation from Renewable Energy Sources  
Heating and Cooling  
Renewables in Transport  
Emissions Avoided Through The Use of Renewables  
Renewable energies have undergone constant growth in Germany. Their share in gross final energy consumption reached 21.6 percent in 2023 (calculated in accordance with EU directive

(2018/2001)). The electricity sector is the main driver behind this development with renewables already providing 52.5 percent of electricity consumption in the year 202 See more on umweltbundesamt Published:
