Use A Generator in An apartment?Generator power output is measured in watts. However, there are two power output figures you need to be aware of when buying a generator: For example, a standard modern refrigerator requires 1200 watts of power to start up, but it only draws on 200 watts of power once it's running. You need to make sure the generator you buy is pow...See more on primalsurvivor Wikipedia

Power station - Wikipedia

OverviewHistoryThermal power stationsPower from renewable energyStorage power stationsTypical power outputOperationsSee also

A power station, also referred to as a power plant and sometimes generating station or generating plant, is an industrial facility for the generation of electric power. Power stations are generally connected to an electrical grid. Many power stations contain one or more generators, rotating machines that converts mechanical power into three-phase electric power. The relative motion between a magnetic field
