

# How many watts of photovoltaic panels correspond to how many inverters

## Overview

---

The DC/AC ratio (also called the panel-to-inverter ratio) compares the total DC wattage of your solar panels to the AC wattage rating of your inverter. For example, if you have 4,000 W of panels and a 3,000 W inverter, the ratio is:  $DC/AC \text{ ratio} = 4000 \div 3000 = 1.33$ . Prevent undersized or oversized inverter issues. Always confirm with the specific inverter. Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. In this article, we'll explore the role of inverters, factors influencing how many you need, and how to choose the right setup.
