

# How many years does it usually take for solar power to pay back

## Overview

---

For most homeowners, solar panels take about 6 to 10 years to pay for themselves, depending on system cost, electricity rates, incentives, and local policies. However, in some states, the payback period can be as short as five years or as long as 15. In this guide, we'll help you calculate your solar panel payback. That break-even point—your solar payback period—tells you exactly when your system stops costing you money and starts making you money. The time it takes for your solar system to break even depends on several factors, including installation costs, energy savings, government incentives, and electricity rates in your area. Factors like electricity.
