

# How often does the san jose solar battery cabinet charge and discharge

## Overview

---

The battery starts the day with a minimum charge, charges to 100% using excess solar generation throughout the day, and then discharges as much as possible during the evening and night. Something that not many storage system shoppers realise is that it is possible to charge/discharge (or 'cycle') your batteries more than once a day. This can support critical home systems for around 24 hours during a power outage. To meet higher energy needs, you might require additional batteries. Installation costs are around \$9,000. However, home battery storage doesn't simply shut down after a certain length of time. Like solar panels. A battery's lifespan generally ranges from 5 to 15 years, which can vary depending on the battery type and usage.
