

# Is it better to do solars or energy storage

## Overview

---

Energy storage can provide multiple grid services. It can support grid stability, shift energy from times of peak production to peak consumption, and reduce peak demand. Solar-plus-storage shifts some of the solar system's output to evening and night hours and provides. A solar battery helps store solar energy for later use. If your home uses lots of power or faces outages, a strong battery system can help. But before buying one, you should know both the good and the bad sides. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. This is particularly true in California, where Public Safety Power Shutoffs (PSPS) used by utilities to prevent forest fires have affected tens of thousands of people.
