

# Is the generator room a substation

## Overview

---

The power distribution room generally refers to the power distribution substation. The substation in the power plant is a step-up substation, which is used to boost the power generated by the generator and feed it to the high-voltage grid. Designing a substation or switchroom requires careful planning and consideration of various factors to ensure the safety, reliability, and efficiency of the electrical system. Substation transforms voltage from high to low or from low to high as necessary. Electrical equipment may be for power distribution. A substation is a power facility in the electric power system that transforms voltage levels, receives and distributes electrical energy, controls the direction of power flow, and adjusts voltage.
