

# Make your own solar water pump

## Overview

---

With just PVC pipes, a small pump, and a solar panel, you can build a homemade solar water pump that is durable, efficient, and strong enough for gardening, irrigation, or even supplying water to your home. The best part?

It works without electricity—100% powered by the sun!. While commercially available solar pumps exist, building your own offers a deeper understanding of the system, potential cost savings, and the satisfaction of self-sufficiency. This article outlines building a simple, effective DIY solar-powered water pump. Understanding the Components: Your solar. Essentially, they utilize solar panels to generate electricity, powering a pump that draws water from wells, ponds, or rainwater collection systems. Pumping water is essential for many domestic and commercial activities. Doing so allows you to supply water to an off-grid house, irrigate crops, or filter water in a swimming pool or a pond.
