Overview

The SFS examined the potential impact of energy storage technology advancement on the deployment of utility-scale storage and the adoption of distributed storage, and the implications for future power system infrastructure investment and operations. The National Renewable Energy Laboratory (NREL) launched the SFS in 2020 with support from the U. Department of Energy to explore the possible evolution. NREL is analyzing the rapidly increasing role of energy storage in the electrical grid through 2050.
