

# Oslo commercial wind power system

## Overview

---

The project, named SCALEWIND, will demonstrate all components involved in a utility scale wind park including an extra large WTG, the Deepsea Star™ semisubmersible steel foundation, a mooring system, dynamic cables, as well as a subsea infrastructure for collecting and delivering the. The project, named SCALEWIND, will demonstrate all components involved in a utility scale wind park including an extra large WTG, the Deepsea Star™ semisubmersible steel foundation, a mooring system, dynamic cables, as well as a subsea infrastructure for collecting and delivering the. Odfjell Oceanwind (OOW) has secured a slot with 24MW capacity grid connection at the Marine Energy Test Centre (METCentre), with the ambition of installing one full-scale floating offshore wind turbine in 2028. The project, named SCALEWIND, will demonstrate all components involved in a utility. The figures and graphs showing numbers and data from the power system provide an overview of how the power system operates. Data may be missing in some places on this page, for example, data from wind power production that came into operation after 2019 and solar. Norway's wind energy sector has been steadily growing, with both onshore and offshore projects gaining momentum. As the country moves toward achieving its ambitious climate goals, wind power—particularly offshore and floating wind—has become a cornerstone of its renewable energy strategy. 1 That includes both the upgrading of existing wind farms and development of new onshore and offshore. Norwegian World Wide Wind and MIRDC, a Taiwanese government research organization, to cooperate on new floating technology for offshore wind. The Norwegian company World Wide Wind (WWW) and Metal Industries.
