

Raw materials for energy storage lithium batteries

Overview

Battery production relies heavily on a variety of raw materials, which serve as the essential building blocks for energy storage. These materials include lithium, cobalt, nickel, manganese, and graphite, each playing a critical role in determining a battery's performance. China imported almost 12 million short tons of raw and processed battery minerals, accounting for 44% of interregional trade, and exported almost 11 million short tons of battery materials, packs, and components, or 58% of interregional trade in 2023, according to regional UN Comtrade data.
