

Residual value of photovoltaic panels

Overview

While it varies by area, it is estimated that solar systems that aren't properly maintained can fall 5 to 10% short of expected production each year. If such maintenance issues persist over several years it can even cause permanent damage to the system and accelerated degradation over. Financial analyses that do not capture the full value across the entire lifetime of an electric-generating asset may undervalue the asset. When the asset is new, its electric generation is often contracted to be sold for a specified period at a predetermined rate. A. Many challenges emerge in the life cycle of solar photovoltaic (PV) panels throughout the processes of their deployment and use in residential, commercial, industrial and transportation sectors.
