

# Rooftop solar photovoltaic power generation grid

## Overview

---

A grid-connected rooftop solar PV system transforms sunlight into electricity, feeding it into the electrical grid through solar panels and inverters. Solar Costs Have Reached Historic Lows: Average residential solar costs have dropped to \$3.30 per watt in 2025, representing a 60% decrease from 2010 levels. Combined with the 30% federal tax credit extended through 2032, most homeowners can achieve payback periods of 6-12 years with 25+. The process of designing and planning the positioning of solar panels on a rooftop is called solar rooftop design. However, the concept of a grid-connected solar system. Solar photovoltaics (PV) is a very modular technology that can be manufactured in large plants, which creates economies of scale, but can also be deployed in very small quantities at a time.
