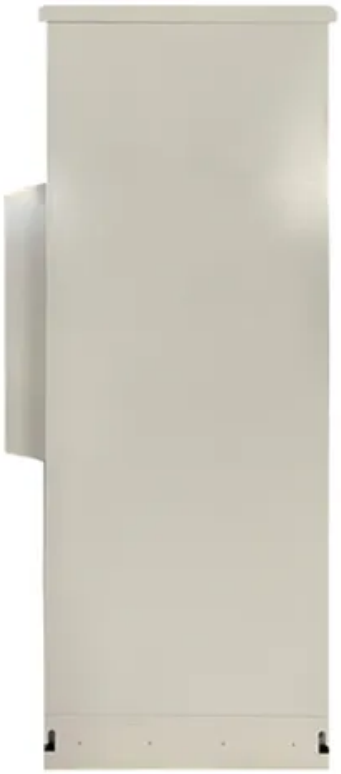
Series operation of solar container lithium battery packs



Overview

Battery packs are designed by connecting multiple cells in series; each cell adds its voltage to the battery's terminal voltage. Figure 1 below shows a typical EarthX 13. 2V LiFePO4 starter battery cell configuration. Batteries may consist of a combination of series and parallel connections. This ensures that the same current flows through all the. When you connect battery packs in series, you're essentially lining them up so that the positive terminal of one battery pack is connected to the negative terminal of the next one. For example, if you have three 4.
