

Solar panels directly used for inverter

Overview

You can connect a solar panel directly to an inverter and run your appliances. In a grid tied system, the solar panels and inverter do not need a battery because power can be transmitted and sent to. It's appealing to just connect solar panels directly to an inverter, and bypass the safer and more expensive charge controller. Typically, a complete solar power system includes solar panels, a charge controller. Grid-tie and hybrid systems aren't DIY-friendly: not any inverter can be used and you have to know the laws and regulations in the area to perform the installation yourself. Solar panels by themselves produce direct current (DC) under sunlight. While it seems like an easy shortcut, a direct connection isn't a good idea for a stable or safe power.
