

# Solar panels generate electricity for winter heating

## Overview

---

Yes, solar power can heat your home during winter months, but it's not always a straightforward yes-or-no answer. Your success depends on where you live, how your house is constructed, the type of solar heating system you choose, and whether you have backup options available. Solar panels can be used for both electricity and heating, but it's important to understand the differences between solar heating and solar panels. Cold temperatures actually help panels operate more efficiently.
