

# Solutions for old PV inverters

## Overview

---

Inverters | Replacing outdated inverters can significantly boost the yield of a PV power plant and rectify equipment failures. Inverter failures usually occur on systems that are 10+ years old. Jörn Carstensen of Germany-based greentech looks at the technical, financial and logistical considerations involved in a successful inverter repowering project important in. While solar panels generally come with 25-year warranties and can continue generating power well beyond three decades, the technology behind inverters and other balance of system components may become outdated much more quickly. The easiest fix to ensure solar projects are working at their peak is. SMA Repowering offers an ideal replacement solution for aging devices no longer operating at peak performance.
