

# Southern Power Grid Energy Photovoltaic Energy Storage

## Overview

---

Southern Power, a leading U.S. wholesale energy provider and subsidiary of Southern Company, has been awarded two 20-year power purchase agreements by Southern California Edison (SCE) and is adding battery-based energy storage resources at both Southern Power's Tranquillity. Southern Power, a leading U.S. While reliability investments often increase prices during high-demand hours could increase by \$988 per megawatt-hour (MWh) by 2035. The analysis also estimates that overreliance on a single type of legacy. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. Twenty-six of these facilities are co-owned by third parties, with Southern Power. Key drivers of cost-optimal deployment ranges from 7 to 77 gigawatts. To understand what could drive future grid-scale storage deployment, NREL modeled the techno-economic potential of storage when it is allowed to independently provide three grid services: capacity, energy storage, and ancillary services. Energy Storage and Southern.
