

Spanish rooftop photovoltaic panel subsidies

Overview

Across Spain, except Cantabria and Galicia, municipalities with populations up to 5,000 and non urban areas, and small towns with populations up to 20,000, provide basic support covering twenty percent of total installation costs, up to a maximum of fifty percent. These will be used to implement programmes with incentives linked to self-consumption and storage and with renewable energy sources, as well as for the implementation of renewable thermal systems in the residential sector, within the framework of the Recovery, Transformation and Resilience Plan. As Spain pushes toward its 2030 renewable energy targets, rooftop photovoltaic (PV) subsidies have become a political lightning rod. With over 300,000 Spanish households currently using solar panels, recent policy changes are sparking heated debates. But what does this mean for rooftop PV adopters. The 2025 subsidies and tax credits make solar energy more accessible. Discover how this government subsidy can help you invest in solar panels, battery storage systems and. The Spanish government has taken significant steps to promote self-consumption of solar energy, including the approval of a road map with over thirty measures aimed at facilitating its deployment and eliminating barriers. But before you get too excited, you'll want to check your local town hall's fine print—because not all sunshine.
