

# West Asia New Energy Storage Battery Project

## Overview

---

Spanning Australia, Japan, Southeast Asia and South Asia, these deployments represent a substantial contribution to 16 GWh of new Battery Energy Storage System (BESS) capacity projected to be added in APAC (excluding China) in 2025, according to BloombergNEF. A subsidiary of CATL and local partners have begun construction on a battery manufacturing complex in West Java, Indonesia. It is part of a project, which CATL said spans the “full. The energy storage battery project is an expansion of Eve Energy's existing facility in Malaysia, which began operations in February this year. As we have discussed previously, several Asia-Pacific countries have set ambitious targets for renewable energy, contributing 30-50 percent of their respective power. Summary: West Asia is rapidly emerging as a hub for energy storage solutions, driven by renewable energy integration and grid stability demands. This article explores the strategic locations of energy storage power stations in the region, analyzes market trends, and highlights groundbreaking. Battery storage delivers the flexibility renewables desperately need, giving it the potential to transform power markets.
