

# What are the photovoltaic panels on the platform

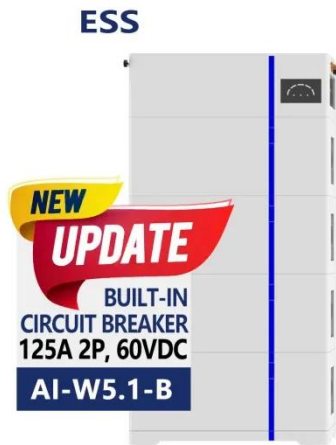

## Overview

---

Floating solar farms, often called floating photovoltaic (PV) systems, are solar panels mounted on platforms that float atop lakes, reservoirs, or other calm water bodies. It consists of several components: Hall cells that capture the sun's rays and convert them into electricity. Unlike traditional solar farms installed on rooftops or vast land areas, these floating arrays harness sunlight while. Get a detailed real-time view of your entire fleet from a single, easy-to-use platform. Track, manage and optimize the performance of multiple SolarEdge systems with smart tools which let you access the specific data you need.
