

What are the popular sizes of photovoltaic panels now

Overview

Solar panels are available in several standard sizes, with the most common being 60-cell and 72-cell configurations. These dimensions are based on the number and arrangement of photovoltaic (PV) cells within the panel. Panel “Size” vs Physical Dimensions: The most critical distinction for homeowners is that solar panel “size” refers to electrical output (measured in watts), not physical measurements. A 400W panel has the same physical footprint whether it produces 350W or 450W – the difference lies in cell. The size of solar panels with the same cell count varies slightly, depending on the brand and model. Still, most 60-cell solar panels have a size of 39” X 66” and most 72-cell solar panels have sizes of around 39” X 77”.
