

# What can be raised under photovoltaic panels

## Overview

---

Agrivoltaics creates ideal microclimates where shade-tolerant crops can thrive with 20-30% less water consumption. Leafy greens, root vegetables, and berries are among the top performers in solar panel farming systems. It allows for renewable energy systems and agriculture to occur on the same piece of land. What are the benefits?

Agrivoltaic systems can improve land use by allowing you to produce more. Agrivoltaics refers to any type of farming or crop cultivation that occurs underneath or around solar panels. It works by placing solar panels high above crops. By growing crops or grazing animals underneath raised solar panels, farmers can maximize the productivity of their land and earn extra income at the same time. 9 MIN READ • Last updated: 1.
