

# What effect does solar power generation rely on

## Overview

---

Solar PV is based on the photovoltaic effect, by which a photon (the basic unit of light) impacts a semi-conductor surface like silicon and generates the release of an electron. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Below, you can find resources and information on the. These solar panels, mounted on a rooftop in Germany, harvest solar energy and convert it to electricity. Solar energy is created by nuclear fusion that takes place in the sun.
