

# What is the peak output of a 6v photovoltaic panel

## Overview

---

The output voltage of a 6V solar panel typically ranges from 6V to 7. Voltage output can change based on several factors, including the angle of sunlight, temperature, and the load connected to the panel. Environmental conditions, such as temperature and sunlight intensity, can lead to variations in. The voltage at maximum power, commonly referred to as VPM, is the voltage reading you'll get when your panel is connected to the maximum load and is performing at its peak. This amount will be determined under standard test conditions (STC).
