

# Will photovoltaic panels break down in winter

## Overview

---

With winter comes colder temperatures, shorter days, and the belief that both factors negatively impact solar panel efficiency. Solar panels work in the wintertime and can even be more efficient than in the summer months. This is because, like with many electric devices, solar panels can overheat when it's too hot. But that doesn't mean they need day after day of warm, sunny weather to operate. And not just because panels continue generating electricity —installing them during this season can offer advantages many people don't know about.
